

A Neurodegeneration Focused Company

Aquinnah Pharmaceuticals is an award winning, vibrant and growing biotechnology company located at 610 Main Street, Cambridge MA, in the new LabCentral at Pfizer. The company is developing small molecule novel therapeutics for ALS, Alzheimer's and other neurodegenerative diseases, based on the biology of Stress Granules and RNA binding proteins. Investors include Pfizer, AbbVie and Takeda Pharmaceuticals.

We are seeking a variety of exceptional neuroscientists, chemists and an operations & *executive administrator*

The successful candidates will be highly driven to make an impact by joining our very collaborative team of dedicated individuals to help develop *first in class* drugs for neurodegenerative diseases where significant unmet medical needs exist.

Aquinnah is seeking scientists in the following areas and experience:

- Medicinal Chemist: Ph.D. with 15+ years drug discovery and development experience
- Ph.D. and M.S. degrees with 3-15+ years of neurobiology and drug discovery experience in the following areas:
 - ALS (Lou Gehrig's disease), preferably with a working knowledge of genetic targets
 - Cell biology, animal models, HTS, drug discovery and development
 - Alzheimer's disease, preferably with a working knowledge in tau
 - Cell biology, animal models, HTS, drug discovery and development
 - Frontotemporal dementia
 - Cell biology, animal models, HTS, drug discovery and development

Attractive compensation and benefits package available including stock options, commensurate with experience for individuals that are results driven, with excellent oral & written communication skills.

All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, and national origin, disability or protected veteran status.
