

Company

Bolden Therapeutics is a preclinical stage biotech company developing first-in-class therapeutics to treat Alzheimer's disease and other CNS disorders. Our technology is centered around promoting adult neurogenesis, the endogenous formation of new neurons from neural stem cells in the adult brain. We have identified a novel signaling pathway that can be manipulated to increase adult neurogenesis and improve hippocampal-dependent memory in vivo.

We seek a highly motivated **Senior Research Associate** to join our team for a February start date. Research will be performed at LabCentral in Kendall Square, **Cambridge, MA**. This is an opportunity for a reliable and self-motivated person to participate in cutting edge therapeutic development. Primary responsibilities are to design and conduct experiments using molecular and cellular biology approaches. Specific duties are to establish and perform cell-based screening assays.

Requirements

- PhD or 5+ years of molecular biology and tissue culture lab experience
- Must be able to work independently and productively within a dynamic, shared research facility
- Must be highly organized and document all experiments and results appropriately
- Excellent oral, written, and interpersonal communication skills
- Previous industry (biotech/pharma) experience is preferred

LabCentral is a state-of-the-art, shared research facility with extensive amenities, including a kitchen and an open-plan communal space to facilitate interaction with other LabCentral members.

Interested?

If you are excited to get in on the ground floor of a biotech exploring a novel approach for treating neurological disease in an exciting, state-of-the-art work environment, please send your cover letter/CV to jpage@boldentherapeutics.com
