Lab Prototyping Associate

Be somewhere, be authentic, share your passions, and create change. We are a collaborative workspace changing the face of science and technology, and we need more than just scientists and engineers to innovate. Our team collaborates across disciplines, relying on our skills to add value to this unique culture, positively impacting the successes of our community.

We're growing as fast as our resident companies which means we need your talents and experience to help us thrive. Join our team in the position of Prototyping Lab Associate at MIT's Engine where you would be reporting to the Prototyping Lab Manager.

You'll be the best fit for this role if you have a bachelor's degree in an engineering discipline and/or 1-3 years of experience working in the field of manufacturing or engineering. Bonus points if your dream Sunday is a trip to the hardware store to buy random materials to build something out of nothing.

What your day looks like:

- Maintain and troubleshoot mechanical and digital fabrication equipment
- Lead manufacturing operations and manage related EH&S and safety procedures
- Display a high-level of customer service and ensure residents have a positive experience
- Establish and build relationships with vendors
- Support residents working on manufacturing equipment and organize related training sessions

Some "you shoulds" that will enhance your day:

- Love working autonomously while being part of a team
- Be prideful in the quality of your work
- Have strong time management, organization, and decision-making skills
- Believe work and having fun can be synonymous
- Enjoy continuously learning, tinkering, and tackle whatever comes your way

What your first six months will look like:

- Discover the five best ways we make our morning coffee, enrich our team, and find your place
- Train on digital fabrication equipment, like 3D printers, laser cutters, and more
- Continue to build your skills and set goals for personal and professional growth
- Develop an understanding of the LabCentral, MIT, and the Engine communities
- Work with the Prototyping Lab Manager to crosstrain on laboratory equipment and operations
- Learn our systems and provide feedback on how to do things better

A snapshot of our benefits:

Premium healthcare and dental package, yearly parking pass or MBTA coverage, long and short-term disability, life insurance, unlimited vacation, and 401(k) package.

Only complete applications will be reviewed. Applications are submitted at LabCentral.org and will include a resume/cover letter specifically discussing your interest in joining the LabCentral team.
