

## Research Associate - Cambridge

Regel Therapeutics is an early-stage startup based in Cambridge, MA and San Francisco, CA that is pioneering precision gene therapies. We are currently looking for a talented Research Associate to join our R&D team under the guidance of senior scientists. Joining at this early stage provides the opportunity to help shape our research aims and company culture.

### Location

Cambridge, MA

### Role Responsibilities

- Establish and implement *in vivo* screening methodology
- Validate hits using single-cell sequencing and histological techniques
- Participate in experimental design
- Maintain accurate and detailed documentation of activities
- Communicate research findings to leadership

### Required Qualifications

- BA/BS or MS in biology, neurobiology or related field with 2-3 years relevant research experience
- Significant experience with standard molecular biology techniques
- Hands-on experience handling mice
- Experience with tissue processing, immunohistochemistry, and neuroanatomy
- Excellent written and oral communication skills
- Proven track record of working in collaborative environments

### Preferred Qualifications

- Experience with mouse surgical techniques (including stereotaxic injections)
- Experience with mammalian cell culture
- Experience in single-cell genomics techniques
- Previous experience working with AAVs
