

Research Associate - San Francisco

Regel Therapeutics is an early-stage startup based in Cambridge, MA and San Francisco, CA that is pioneering precision gene therapies. We are currently looking for a talented Research Associate to join our R&D team under the guidance of senior scientists. Joining at this early stage provides the opportunity to help shape our research aims and company culture.

Location

San Francisco, CA

Role Responsibilities

- Establish and implement *in vitro* screening methodology
- Design and assemble screening constructs
- Work with computational collaborators to analyze experimental results
- Participate in experimental design
- Maintain accurate and detailed documentation of activities
- Communicate research findings to the R&D team

Required Qualifications

- BA/BS or MS in biology, neurobiology or related field with 2-3 years relevant research experience
- Strong background in tissue culture and aseptic techniques
- Significant experience with standard molecular biology techniques, chromatin immunoprecipitation, vector cloning, and immunohistochemistry
- Excellent written and oral communication skills
- Proven track record of working in collaborative environments

Preferred Qualifications

- Experience with large-scale genetic screening methods
- Experience with single-cell genomics techniques and analysis
- Experience in Lentivirus and AAV production and purification
