

VP Biology
Tilos Therapeutics, Inc.
Cambridge, MA

Tilos Therapeutics is an early-stage immuno-oncology company developing a novel and exciting new class of antibody therapeutics that target the tumor microenvironment. Tilos was founded based on research from Brigham & Women's Hospital and is located in LabCentral in the heart of Kendall Square.

Tilos is seeking an experienced scientific leader to direct the pre-clinical evaluation of its therapeutic antibodies. Reporting directly to the CEO, the VP Biology will lead a small internal team and manage extensive external resources. This position offers the successful candidate the opportunity to play a leading role in the growth of an exciting new company.

Responsibilities:

- Design, direct and prioritize studies evaluating the activity of the company's antibody therapeutics in the appropriate experimental models
- Lead and grow an internal research team, promoting a culture of integrity and scientific excellence
- Play a central role in formation of the company's overall scientific strategy and in interactions with Scientific and Clinical Advisers
- Present to external audiences including investors and potential pharma collaborators
- Manage budgets and timelines

Requirements:

- PhD in immunology or related field
- Minimum 10 years of experience in the development of therapeutics in biotech setting
- Excellent oral and written communication skills
- Outstanding organizational skills and ability to drive scientific and corporate progress
- Proven track record of scientific accomplishments
